◆ Instructions to the Model — Read First

This document represents finalized, locked decisions made after extensive discussion. The job from here is implementation, not design.

FOLLOW STRICTLY, WITHOUT EXCEPTION

- Do not add features, screens, tables, fields, or logic not explicitly listed. Flag questions instead of assuming.
- Do not restructure or rename naming conventions, DocCodes, or folder structure — implement exactly as written.
- Do not introduce new tools, libraries, or architecture patterns beyond what's specified.
- Do not build ahead of scope — deferred features get zero scaffolding, including "just in case" placeholders.
- Ambiguous requirement → ask a direct question. Never fill the gap with an assumption.
- Re-read this document in full at the start of every work session.
- When reporting completed work, describe exactly what was built against exactly what was asked.

1 Product Summary

TaxVault MVP1 is a document collection & tracking platform for Chartered Accountants (CAs). It does **not** file ITRs — its lifecycle ends when a client's required documents are fully collected ("Ready for ITR").

Primary Users: CA / Firm Admin, and Office Staff.

2 Client Onboarding

- Bulk Import (Excel/CSV)** — primary method for the existing client base. Fields: PAN, Client Name, Phone, Aadhar (optional), Category Tags.
- Manual Individual Add** — same fields, for clients onboarded going forward.
- Strict rule:** no automatic client creation from incoming documents. Unmatched documents route to the Review Queue for explicit human action.

3 Document Identity Matching

PRIORITY	IDENTIFIER	RULE
1	PAN Number	[A-Z]{5}[0-9]{4}[A-Z]{1} — highest priority
2	Aadhar Number	12-digit match, stored masked/hashed
3	Phone Number	Fallback only if PAN & Aadhar absent

Name matching is explicitly excluded — false-positive risk. No match → Review Queue, no guessing.

4 Document Intake Pipeline

Source: a watched local folder (e.g. Downloads), accepting batches of 600–700 mixed files.

Digital PDFs use direct text extraction (no OCR cost). Scanned/image files route through Google Cloud Vision. Non-document types (.exe, .zip) are skipped and logged.

Out of scope for intake: email inbound parsers, WhatsApp APIs, client-facing upload portals.

5 Requirement Profile — Base + Category

Base documents (mandatory for every client): AIS 26AS

CATEGORY TAG	ADDS REQUIRED DOCCODES
Salaried	Form16
Stock / Equity Investor	CGSTMT DEMAT
Mutual Fund Investor	MFSTMT
Home Loan Borrower	HLINT
Rental Income	RENT RENTAGR
Donations (80G)	80G
Insurance (80C / 80D)	80C 80D
NPS Contributor	NPS
Business / Professional Income	BANKSTMT

Required Docs = Base + union of all tagged categories. Mapping is configurable per firm, never hardcoded.

6 Keyword-Based Classification & DocCodes

Classification relies strictly on configurable keyword/pattern matching on extracted text — no ML or LLM involved.

DOCUMENT TYPE	CODE	DOCUMENT TYPE	CODE
Form 16 (Salary TDS)	Form16	Bank Interest Certificate	BANKINT
Form 16A (Non-salary TDS)	Form16A	80C Investment Proof	80C
Annual Information Statement	AIS	80D Health Insurance	80D
Taxpayer Information Summary	TIS	80G Donation Receipt	80G
Tax Credit Statement	26AS	Home Loan Interest Cert.	HLINT
Capital Gains Statement	CGSTMT	Rent Receipt / Agreement	RENT / RENTAGR
Mutual Fund Statement	MFSTMT	Salary Slip / Aadhar Card	PAYSLIP / AADHAR
Bank Statement	BANKSTMT	PAN Card / Demat Stmt.	PANCARD / DEMAT
NPS Statement	NPS	Property Sale Deed	PROPDEED
Unclassified File	MISC	—	—

7 Assessment Year (AY) Logic

Computed automatically from India's Financial Year calendar — rolls over every April 1st. Never manually set.

TODAY'S DATE	FY JUST CLOSED	CURRENT AY
26 Jul 2026	FY 2025–26	AY 2026-27
15 Mar 2026	FY 2024–25	AY 2025-26
02 Apr 2026	FY 2025–26	AY 2026-27

AY is selected once per batch, pre-filled with the computed default, overridable by the CA for belated filings. All documents in a batch inherit the selected AY.

8 Naming & Storage Structure

Folder:

```
/Vault/{PAN}_{ClientName}/{AY}/
```

Filename:

```
{PAN}_{DocCode}_{AY}_{Date}.ext (Date = YYYYMMDD)
```

Example:

```
/Vault/FGHIJ5678K_PriyaMehta/AY26-27/FGHIJ5678K_CGSTMT_AY26-27_260726.pdf
```

Rename + move occurs as one atomic step. Originals archived (never deleted) in `Processed_Archive` . Exact duplicates skipped via content hashing.

9 "Ready for ITR" Logic & Review Queue

STATUS	CONDITION
Ready	Missing Required Docs = 0
In Progress	Missing Required Docs > 0 (e.g. "3 of 5 received")
Not Started	Received Required Docs = 0

MISC files and unmatched documents enter the Review Queue for manual staff reclassification — no auto-suggestions, no ML triage. Once staff assigns a client and/or DocCode, the file moves immediately into that client's correct `/Vault/{PAN}_{ClientName}/{AY}/` folder — the same outcome as an automatic match, just human-confirmed.

The Client Vault view shows only the currently selected AY's documents by default. Prior years exist on disk (nested by AY) but are not surfaced in the default view.

10 Two-Stage Email Reminders

Stage 1 — Initial Request	Stage 2 — Follow-up
Auto-drafted, personalized per client, listing the full Required Docs list using friendly display names. One email per client, never CC/BCC.	Recalculates Required – Received at send time. Lists only what's missing. Clients already "Ready" are automatically excluded.
Manual trigger only. Email channel exclusively — no automation, no other channels in MVP1.	

11 Multi-Tenancy, Roles & Security

Multi-Tenancy: strict database isolation via `firm_id` on every core table. New firms provisioned manually by the system admin.

Data isolation: a client or staff member of one firm must never see, query, or infer another firm's data — no cross-firm results, no leaking record counts, applies to every view and download, not just lists. Storage includes PAN, Aadhar, phone, and financial documents for many individuals — falls under India's DPDP Act (2023), not just Aadhar rules; worth a legal check before onboarding other firms' real data.

ROLE	ACCESS
Firm Admin	Full access — clients, staff, category settings, DocCode mappings, reminders, all vaults
Staff	Clients, vaults, reminders, Review Queue — no firm-level settings access

Session: 60-minute auto-logout on inactivity. In-browser document preview and bulk ZIP download supported.

12 Scope Lock

IN — BUILD THIS	OUT — DO NOT BUILD
✓ Bulk + manual client onboarding ✓ Folder-based document intake ✓ PAN / Aadhar / Phone matching ✓ Keyword-based classification ✓ Auto-computed Assessment Year ✓ Ready-for-ITR status logic ✓ Two-stage manual email reminders ✓ Review Queue ✓ Multi-tenant data model ✓ Two roles, 60-min session timeout	✗ Email inbox / WhatsApp intake ✗ Client-facing upload portal or login ✗ Automated / scheduled reminders ✗ ML or LLM-based classification ✗ OCR-based per-document AY inference ✗ Per-client staff assignment ✗ Audit trails / activity logs ✗ Firm self-signup or billing ✗ Analytics, charts, trend dashboards ✗ External ITR filing integrations

13 Technology Architecture

LAYER	CHOICE
Backend	Django (Python)
Database	PostgreSQL
File Storage	Cloudflare R2
OCR	Google Cloud Vision API
Email	SES / Mailgun
Task Queue	Celery / Redis
Hosting	Neon + Cloud Run (scale-to-zero, seasonal cost)

THE ONE RULE THAT MATTERS

Every decision on this page took real conversation to lock in. The fastest path to a working MVP1 is building exactly this — and raising a question the moment something isn't covered here, instead of quietly deciding independently.
